Global File Transfer Manager (GFTM) is a GTGI-developed middleware solution to automate file transfers and routing between systems. This all-in file transfer automation system manages high-volume email, Google Drive, DropBox, AMRDEC, AWS S3, Azure Blob, IBM Watson, Aspera and FTP transfers. It's the middleware between the transmitter, contributor, DAM/CMS you use and your artificial intelligence and automated closed-captioning capability.

BENEFITS AT A GLANCE

- Lower overall cost of ownership as compared to lease model systems
- No distribution limits
- Automated ingest, routing and processing of any file from any source.
- Flexible email access options (IMAP, POP3, Gmail, more)
- Support for any cloud based storage, file transfer system, and FTP service.

Save Time, Money, Effort
